

Pioneering Wear Protection

VAUTID ASW hardfacing welding consumables

VAUTID hardfacing welding consumables can be used in a great variety of applications. They offer a solution to different problems protecting high-wear components in plant and machinery.

VAUTID VVP composite wear plates

Extended service lifetimes on high-wear surfaces become a reality with VAUTID composite wear plates which are an efficient, use-anywhere solution.

VAUTID GUSS cast products

VAUTID has extensive experience as a supply chain partner for high wear-resistance cast components, which are manufactured to customer specifications.

**INNOVATION FROM THE INVENTOR:
FOR PROFITABLE OPERATION AND
LONG SERVICE LIFE**

“ With our innovative spirit and over 70 years of experience in wear protection, we develop leading system solutions in casting and welding technologies worldwide.”

■ The driving force behind the evolution of wear protection technology was Dr. Hans Wahl, who in 1934 made ground-breaking discoveries regarding wear resistance while developing a coal dust engine. With this knowledge, he founded VAUTID Verschleißtechnik in 1945. Over the course of the next 30 years, the company developed from a modest engineering firm into a consulting and manufacturing company – the world's leading system specialist in wear protection through casting and welding technology.

■ Today, the international VAUTID Group employs around 350 staff members in 10 offices, research laboratories, production sites, and a dense distribution network spanning all continents. The group of companies is growing once again. VAUTID provides industry-specific wear protection solutions from a single source – from consulting to design, simulation, research and development, all the way through to the finished product.

A PIONEER IN WEAR PROTECTION SINCE 1945

Only machines and industrial systems that operate efficiently can generate profits. Continuous, low-maintenance operations and a long service life ensure sustainable business success. The road to prosperity is made possible through innovative VAUTID wear protection in casting and welding technology.

VAUTID for manufacturers and end users. VAUTID system solutions are designed for original industrial plant equipment and process engineering machinery as well as the subsequent protection and regeneration of elements exposed to wear. VAUTID plans, develops and manufactures comprehensive wear protection solutions. Custom-tailored VAUTID concepts are perfectly aligned in terms of technology and economy and ensure reliable, profitable production.

Consistent performance and return on investment with VAUTID

VAUTID consulting and design. Our goal is to develop the best solutions for reducing wear in original equipment operation and maintenance of systems and machines. To achieve this goal, VAUTID engineers analyze your requirements, prepare a fail-safe diagnosis and design a custom solution for protecting wear-exposed parts. The right VAUTID materials are selected to ensure optimum protection against wear, corrosion or heat. VAUTID uses its expertise to cut wear costs and maximize the service life of the equipment.

VAUTID continues to set the standard: V100 has been the #1 product in the industry in metal-based wear protection for over 65 years.

The founder and pioneer of metal-based wear protection was Dr. Hans Wahl

VAUTID grew out of research. With the development of the coal dust engine, Dr. Wahl also helped further the concept of wear protection

GROUND-BREAKING IDEAS AND SUPERIOR TECHNOLOGIES

VAUTID products for manufacturers and end users.

Optimal wear protection for mechanical processes such as crushing, mixing, conveying, extraction, storage, agglomeration, and separation in a wide variety of industries:

- mining
- metallurgy
- concrete and cement
- asphalt
- brick manufacturing
- construction
- coal-fired power plants
- waste incineration
- quarries, building materials, sand, gravel, crushed stone
- recycling
- steel and iron
- pharmaceuticals and chemicals

With its international focus on all major markets, innovative spirit and “Made in Germany” attention to detail, VAUTID guarantees each customer top-of-the-line system solutions and materials that are not just ahead of their time but that ensure perfect quality on the spot.

VAUTID research and development. To ensure maximum wear protection, VAUTID focuses all of its strengths on developing leading, innovative, metallurgic and constructive solutions to wear problems. In the VAUTID wear laboratory, a wide variety of structural tests, strength tests, and analyses (such as FEM) are conducted. By using 3D-CAD designs, model building, and simulated solidification, VAUTID innovations are prepared for market faster and more reliably. By cooperating with universities and institutions and participating in government-backed research projects, VAUTID can incorporate cutting-edge knowledge to ensure a long service life and profitable operation.

VAUTID training sessions, seminars, conferences, and scientific lectures are a perfect complement to the VAUTID catalog of innovative products and solutions. Customers benefit from the latest wear expertise, which they can implement right away into their daily routines.

Proven a million times over and continuously developed

VAUTID production. As a specialist in comprehensive wear protection, VAUTID produces all of its materials in accordance with high VAUTID quality standards in its own production facilities. Here, special raw materials, careful attention to detail, and cutting-edge process engineering are combined with the expertise and commitment of our staff to produce VAUTID premium products. With the ongoing expansion of further production sites, VAUTID will be able to deliver even more highly customized solutions faster than ever before.

VAUTID quality assurance

VAUTID has been ISO 9002 certified since 1993 and ISO 9001 certified since 1996. All VAUTID deposition welding materials, composite wear plates, and casting products are developed, tested and produced in accordance with these strict quality requirements. This guarantees a consistently high standard for all VAUTID premium products.

VAUTID wear research laboratory: Quality control

VAUTID deposition welding materials

The unique VAUTID product portfolio ranges from wear-proof deposition welding materials to composite wear plates to casting products – all offering first-rate protection for wear-susceptible parts in continuous abrasive operations.

Advantages. VAUTID deposition welding materials can be applied quickly and are an especially efficient solution to a variety of wear problems on site. In order to meet every requirement in every field of application perfectly, VAUTID deposition welding materials are available in a variety of material types, alloys and qualities, including hardfacing welding materials, rust-free auxiliary welding materials, auxiliary repair welding materials and special materials. These materials are available as stick electrodes or tubular wire

VAUTID deposition welding materials offer cost-efficient, lasting protection

Fields of application. Typical applications for VAUTID deposition welding materials include coating of mixing tools, hardfacing of excavator teeth, powder deposition welding of fan blades, hardfacing of bucket chain excavators and sinter crushers.

VAUTID deposition welding materials can be applied universally and in a short amount of time. They provide long-lasting, cost-efficient protection for high wear-and-tear parts.

Manual hardfacing using VAUTID stick electrodes

VAUTID tubular wire

VAUTID composite wear plates

VAUTID products employ efficient technologies to help extend the service life of system and machine parts subject to heavy loads. Universal composite wear plates provide robust wear protection and ensure low wear costs over the long term.

Advantages. VAUTID composite wear plates are wear-proof and long-lasting. The hard-surface layer can be made to suit the specific application. The plates are also easily installed through back-side welding or bolting. Composite plates are available in a variety of dimensions and qualities. Plates can be cut to size to conform to drawings and heated or cooled to attain the desired shape – for extremely cost-effective and fast wear solutions in a wide variety of applications and industries.

With its extensive product portfolio designed for a wide variety of individual wear issues, VAUTID is the world's leading specialist in comprehensive wear protection.

VAUTID composite wear plates can be individually installed and are extremely long-lasting

Fields of application. VAUTID composite wear plates are used where wear protection is desired as a self-supporting structure on large surface areas with no supporting substructure. They guarantee maximum operational reliability, even under high mechanical load. Sample applications include strainers, hopper linings, vibration conveyors, fan impellers, casings, mixers, cyclone separators, and sifters.

Production of VAUTID wear plates

VAUTID wear plate

1. Standard sheets and thicknesses (mm)

Coated surface

2.400 x 1.150	2.900 x 1.400
from 3+3	from 5+3
to 25+5/20+10	to 25+5/20+10

Base materials

- Steels (e.g. 1.0038, 1.0570)
- Fine grain steels (e.g. 1.89 ...)
- Hot steels (e.g. 1.7335 ...)
- Heat resistant steels (e.g. 1.4878 ...)
- Corrosion resistant steels (e.g. 1.4301 ...)

2. Special sizes

Up to largest sizes of
1.900 x 3.900 mm
from 6+4 to 25+5/
20+10 mm

3. Plates cut to size

- from 50 x 50 mm
- square boring from 4 x 4 mm
- circular boring from Ø 3 mm
- tear shape boring from Ø 3 mm
- slots from 1.5 mm

4. Formed plates

Simple cold forming is possible only with VAUTID wear plates because of their low dilution between weld deposit and base material. The smallest cold-rolled diameter is 400 mm.

5. Installation-ready fabrications

- Pipes from 400 mm Ø
- Screens with different perforations
- Chutes
- Cyclones
- Elbows
- Troughs
- Distribution chutes
- Ventilators etc.

Qualities of VAUTID wear plates

Weld deposit analyses

VAUTID wear plates are produced in the following qualities Hardness according to DIN 32525-4

Qualities	Hard materials	Binderphase	Binderalloys	Hardness in Vickers	Applications
VAUTID 100	Chromium Carbides	Fe/Austenite	Mn	pure weld deposit ca. 700 HV 10	linings of ventilators, separators, cyclones, linings of mills in the cement and coal industry, screens in the iron and steel industry
VAUTID 100T	Chromium Carbides	Fe/Austenite	Ni, Mn	pure weld deposit ca. 700 HV 10	linings of fans for operating temperatures up to 550 °C, screens in the iron and steel industry for operating temperatures up to 550 °C
VAUTID 130	Chromium + Boron carbides	Fe/Austenite	B, Mn	pure weld deposit ca. 750 HV 10	security and safe plates
VAUTID 143	Chromium + Niobium carbides	Fe/Austenite	Mn	pure weld deposit ca. 750 HV 10	chutes for open pit mining equipment, conveyor chutes, ventilators
VAUTID 145	Chromium Nb, W, V carbides	Fe/Austenite	B, Mn	pure weld deposit ca. 820 HV 10	hot gas ventilators, hot screens for temperatures up to 750 °C, hot dust pipes and bell linings
VAUTID 146-Mining	Chromium Nb, V, V-carbides	Fe-base Austenite	B	pure weld deposit ca. 940 HV 10	chutes, sieves, fans, fan housings, grids, discharge, tables, bell linings, separators, converters, etc.
VAUTID 147	Chromium carbides	Fe/Austenite	B, Mn	pure weld deposit ca. 900 HV 10	hot gas ventilators, hot screens for temperatures up to 800 °C, hot dust pipes and bell linings
VAUTID 150	Chromium + Chromium carbides	Fe/Austenite	B, Mn	pure weld deposit ca. 750 HV 10	pipework in the cement industry, dust and ash pipes with very smooth surface

VAUTID wear plates

UNIQUE PRODUCT PALETTE IN QUALITY AND VARIETY

*“70 years of progress and the strictest requirements
flow into each and every VAUTID product.”*

VAUTID Cast products

VAUTID offers a custom-tailored and cost-efficient solution for every requirement. Cast products are manufactured in accordance with customer needs using a wide variety of materials and casting methods. Optimized geometry combined with additional wear protection is a valuable asset in many applications.

Advantages. VAUTID cast components represent the most cost-efficient method of wear prevention for mass production. Cast products can range in weight from 2 to 30,000 kg depending on the field of application and the type of material. Applications include sand casting, ceramic or Croning molds or lost foam casting. Models, computer simulations and extensive analyses ensure the optimal quality of each component. VAUTID cast products can also be machined directly in the plant to the desired level of precision.

VAUTID casting provides cost-efficient wear protection for series parts

Fields of application. VAUTID hard casting offers highly streamlined production and high-quality wear protection through strict VAUTID quality controls and is ideal for use in a wide variety of industries that contain mechanical processes like crushing, mixing, conveyance, storage, agglomeration, and separation.

Highly wear-resistant VAUTID components offer the most advanced wear protection for both original and replacement equipment from an innovation leader.

VAUTID foundries

VAUTID is an experienced partner in component manufacturing for high carbon and stainless steel casting. VAUTID cast products are manufactured and processed in accordance with customer specifications.

VAUTID casting process

VAUTID wear resisting casting for the concrete industry

Moulding lines

moulding line	600 x 700 mm	green sand
moulding line	1.100 x 1.200 mm	fulan resin sand
moulding line	2.000 x 3.000 mm	fulan resin sand
moulding line	2.000 x 4.000 mm	fulan resin sand
jolt squeeze pinlift moulding	1.100 x 1.200 mm	green-/fulan resin sand
hand moulding	max. 4.000 x 5.000 mm	fulan resin sand
lost foam	2.000 x 2.000 mm	sand

Melting furnaces

500 – 10.000 kg	capacity
300 – 3.500 kg/h	melt capacity

Lot sizes

1 to 150.000/a

Materials

1. Non-alloyed cast steel for general applications (DIN EN 10293)
2. Low-alloyed cast steel for general applications (DIN EN 10293)
3. Heat resistant cast steel for pressure vessels (DIN EN 10213)
4. Tough and hard cast steel
5. Austenitic manganese steel
6. Heat-resistant cast iron (DIN EN 10295)
7. Stainless cast steel (SEW 410, DIN EN 10213)
8. Chilled iron (DIN EN 12513)
9. VAUTID Chilled iron
10. Ceramic composite casting

Casting weights

2 – 30.000 kg

- Own heat treatment at all locations
- Own lab for melting analysis and material tests at all locations
- VAUTID wear-test lab

Moulding process

Individual and mass production of castings with the following moulding processes

- Green sand
- CO₂ sand
- Furan sand
- Lost Foam
- Hotbox (croning)
- Lost-wax process

Pattern shop

Manufacture of patterns in own pattern shop out of

- Metal
- Wood
- Plastics
- Polystyrol

Quality control

Testing possibilities

- Verify of dimensional accuracy
- Chemical Analysis
- Hardness (HB, HRC, HV)
- Microstructure
- Tensile strength
- Elongation
- Impact bending strength
- Magnetic powder testing method
- Ultrasonic testing
- Wear tests
- Calcination test
- Destroying test

CAD

Continual use of CAD supported development and production possibilities for the pattern shop

- Design: 2D/3D-CATIA V 5, Solidworks
- Moulding fill simulation: Flow cast
- Solidification simulation: Solid cast
- Rapid Prototyping: Selective laser sintering (SLS)

Bi-metal hammer

Grate bars in waste incineration

Crawler elements on excavator for open pit mining

Glass recycling; impact crusher for crushing of ceramics
